

Publish example

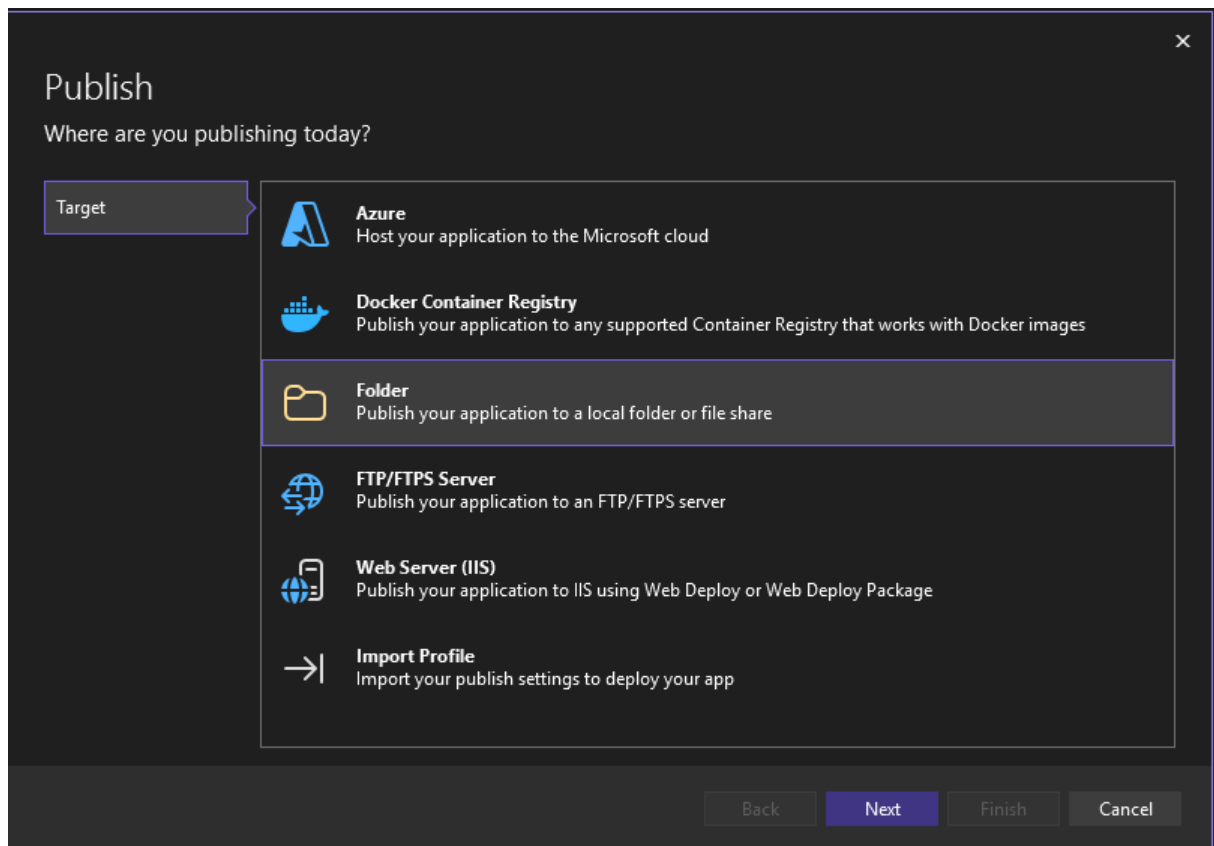

Navigate to „Publish freeDPPapi“

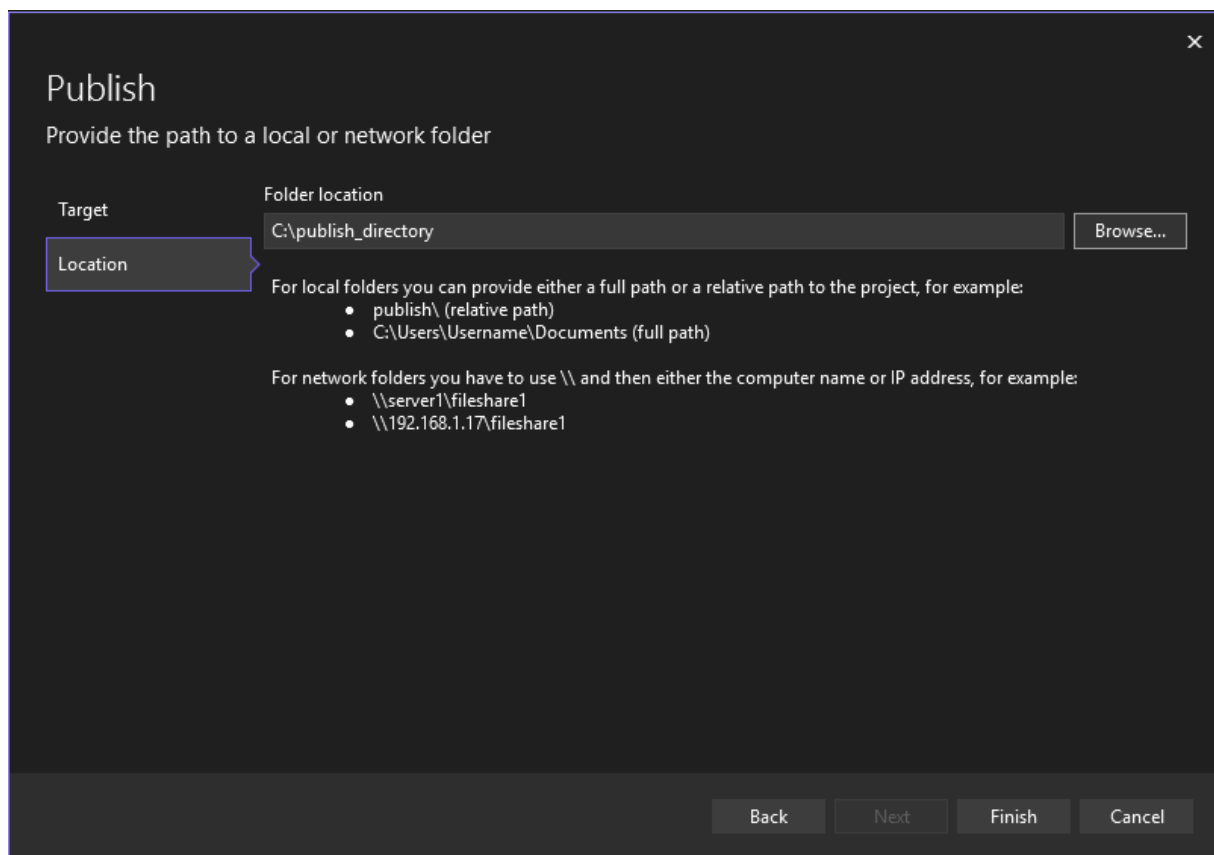

Add a profile

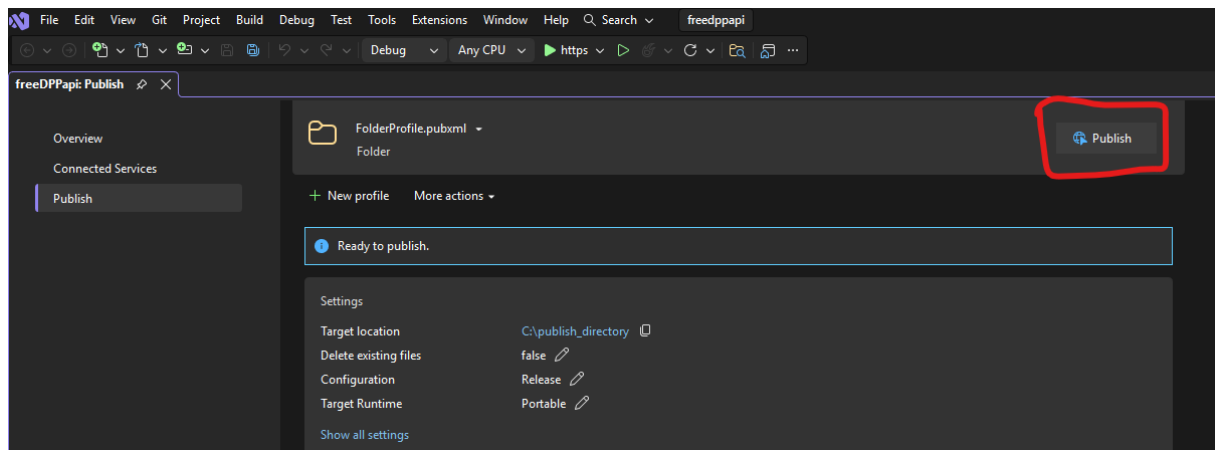

Select your preferred Target. In our case we selected „Folder“

Set the location where the files should be published

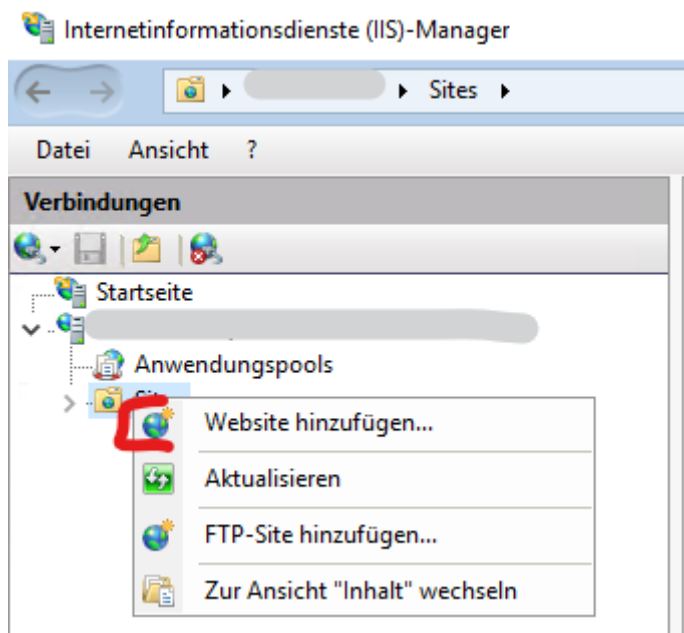

Press publish and wait until the programm is done publishing

Hosting on Windows with IIS

The ASP.NET Core Runtime enables you to run existing web/server applications. On Windows, it is recommended to install the Hosting Bundle, which includes the .NET Runtime and IIS support.

After installing you need to add a new Website to your IIS

Name your website, set the path to the published files and insert your Domain.

The 'Website hinzufügen' dialog box is shown. It has a title bar with a question mark and a close button. The main area is divided into sections. The 'Sitename:' field contains 'drill.freedpp.eu'. The 'Anwendungspool:' field also contains 'drill.freedpp.eu' with an 'Auswählen...' button to its right. Below this is the 'Inhaltsverzeichnis' section, which includes a 'Physischer Pfad:' field with 'C:\path\to\published\files' and a browse button (...). There is also a 'Pass-Through-Authentifizierung' checkbox and two buttons: 'Verbinden als...' and 'Einstellungen testen...'. The 'Bindung' section has three fields: 'Typ:' with a dropdown set to 'http', 'IP-Adresse:' with a dropdown set to 'Keine zugewiesen', and 'Port:' with a text box containing '80'. Below these is a 'Hostname:' field with 'drill.freedpp.eu' and a note: 'Beispiel: "www.contoso.com" oder "marketing.contoso.com"'. At the bottom left, there is a checked checkbox 'Website sofort starten'. At the bottom right, there are 'OK' and 'Abbrechen' buttons.

You need to edit the Application Pool of the website so that there is no managed code

The 'Anwendungspool bearbeiten' dialog box is shown. It has a title bar with a question mark and a close button. The 'Name:' field contains 'drill.freedpp.eu'. The 'NET CLR-Version:' dropdown is set to 'Kein verwalteter Code' and is highlighted with a red circle. Below it, the 'Verwalteter Pipelinemodus:' dropdown is set to 'Integriert'. At the bottom left, there is a checked checkbox 'Anwendungspool sofort starten'. At the bottom right, there are 'OK' and 'Abbrechen' buttons.

The website should be working now. For more security you should install a SSL-Certificate next.
